

# Point of Sale

Who says you can't have brains *and* beauty? After a full redesign from the ground up, our new Point of Sale module is more intuitive than ever! With a focus on User Experience, this critical interface contains streamlined, lightning-fast, and customizable features that help get the job done quickly and efficiently.

- ## Fast Transactions

Frequently used features at your fingertips
- ## Company-wide Inventory Snapshots

See all of your warehouse and locations' inventory in one place
- ## Manage Customers

Easy customer sign up and one-click Rewards redemption keeps them coming back for more
- ## Configurable Features

Features and functionality can be modified to your specific settings
- ## Minimum Setup

No software installs or updates required

With years of experience, client feedback, and new technology at our fingertips, we have created a user-friendly Point of Sale system that will let your employees focus solely on sales and customer service.

With just a few clicks, the POS system can be configured to meet your specific business needs.

All you need is a computer and an internet connection, and you're ready to ring up transactions!

\* Credit card transactions and printed receipts require additional hardware

## Customize Features

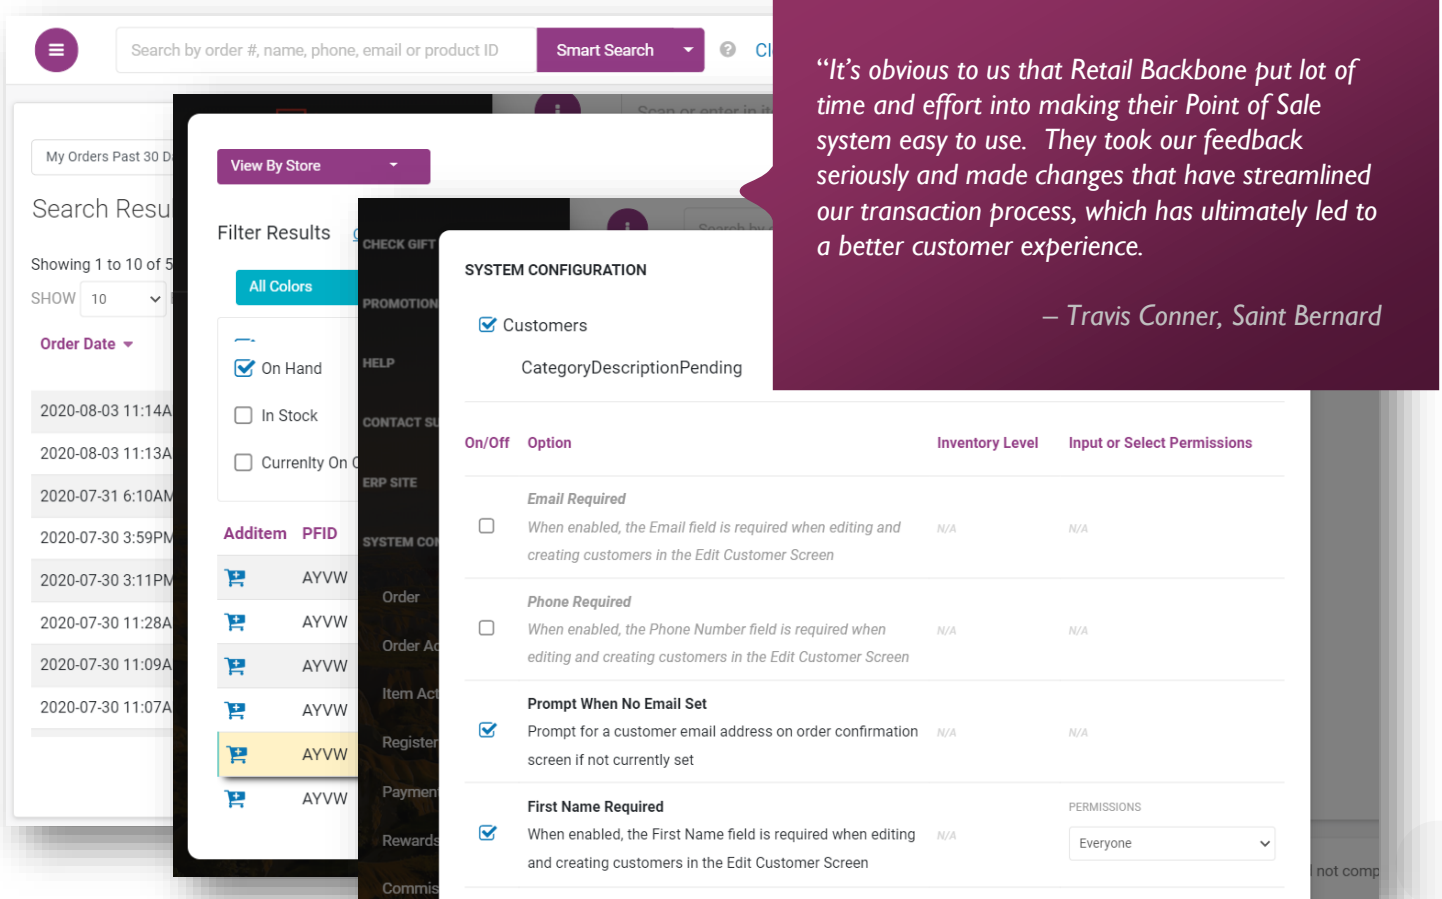

Our easy-to-use system configuration interface allows managers and system administrators to make quick changes on the fly. Commission, Payment Options, Rewards Programs, and Customer Management are among the many settings that can be configured to meet your specific business. Is there something we missed? If so, let us know, and we can add customizations to your Retail Backbone environment.

## Why use POS on the Web?

To access our Point of Sale system, we won't put you through a tedious setup process with unfamiliar hardware. If you have internet access, you have everything you need to work within our POS. We do not install any software on your computers, and all updates are pushed to production with the clients' approval; you won't have to play a waiting game for updates to the system. Clients also love having the option of "line busting," which allows them to complete transactions using a tablet or iPad to keep long lines from forming.

*"It's obvious to us that Retail Backbone put a lot of time and effort into making their Point of Sale system easy to use. They took our feedback seriously and made changes that have streamlined our transaction process, which has ultimately led to a better customer experience."*

*– Travis Conner, Saint Bernard*

The screenshot shows a web-based interface for system configuration. A 'SYSTEM CONFIGURATION' dialog box is open, displaying several settings:

- Customers (CategoryDescriptionPending)
- On/Off Option** table:
